

Tacker for Beilharz- snow fencing

For an even faster and more convenient building our snow fences we offer these in a version for machinery installation of the pegs. This variant is constructed identically to our proven snow fence systems - only the pegs are reinforced, which allows an automatic driving.

Of course, existing systems can be subsequently amplified. For this purpose, additional spot welds must be mounted to the existing pegs. More information is available on request..

Your advantages in an overview:

- save time by faster driving the pegs and faster installation of the fence
- work easier by energy-saving, machine driving the pegs
- reduced material wear by mechanical install
- higher stability of the system constructed
- higher working security for the building staff

So that you always have the right tool, we would like to introduce to you below our gasoline tacker. The tacker can be used on the basis of its own independent power supply in the field.

Specifications

- dimension 73 x 27 x 26 cm
- net weight 11 kg
- 4-stroke petrol engine 35,8 cm³ 1,0 kW
- tool holder: SDS-Max
- impact velocity 2.900 U/min
- switch Function: impact drilling or chiseling function
- includes wrench and carrying strap
